

A small document, fully traceable

Two samples are combined. Preserve every value and its unit.

The measurements below are invented for this example.

1. Measurements

Sample	Volume (L)
Alpha	1.25
Beta	0.75
Total	2.00

2. Check the sum

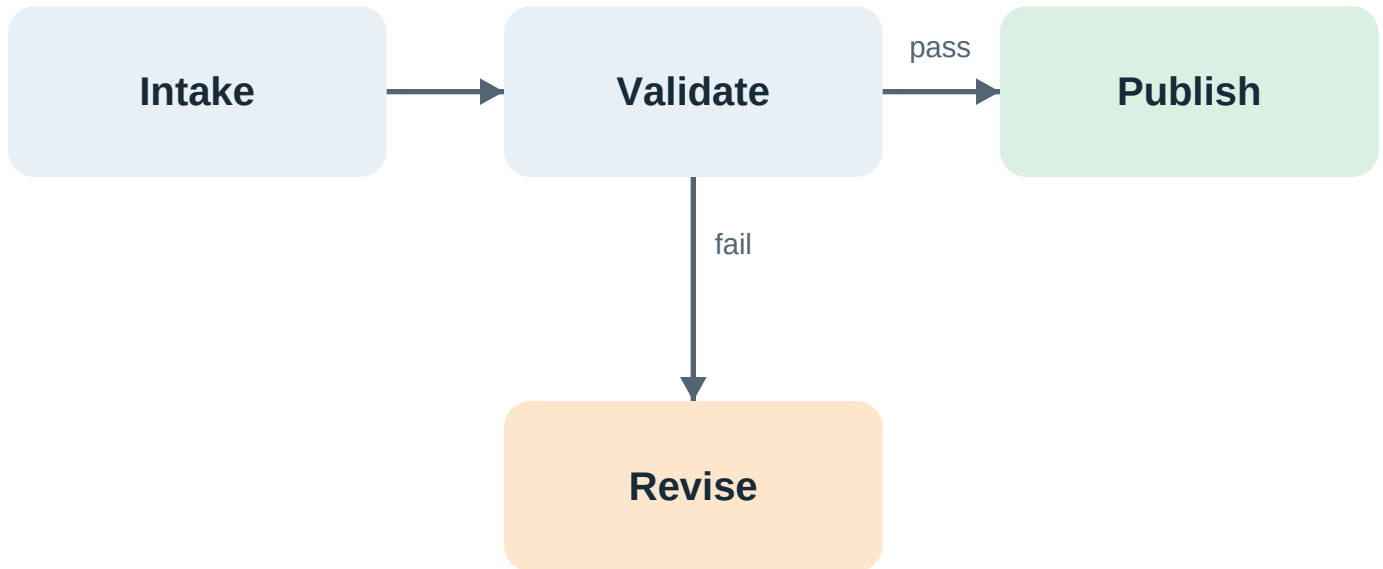

$$V_{total} = V_{Alpha} + V_{Beta} = 1.25 + 0.75 = 2.00 \text{ L}$$

Keep decimal precision. A zero value must remain visible.

Control sample: 0.00 L. Do not treat zero as a missing cell.

A reviewable workflow

Read each arrow and both outcomes before writing a description.

Intake leads to Validate.

A passing check leads to Publish (green).

A failed check leads to Revise (orange).

After revision, request a fresh check; do not imply automatic approval.
